

Patent Application No. 09/754,813

IN THE CLAIMS:

- C1
- Claim 1. (currently amended) A system comprising:
- 5 a plurality of certificate authorities (CAs) in which each CA maintains and distributes digital certificates revoked by itself in the form of a certificate revocation list (CRL), and different CAs may use different CRL distribution mechanisms;
- multiple CRL retrieval agents configured to periodically retrieve CRLs at time intervals from different CAs using a plurality of CRL retrieval agents based on the CRL distribution mechanisms of CAs;
- 10 a plurality of CRL databases for storing the consolidated CRLs from the multiple CRL retrieval agents and/or the replications of CRLs, the CRL databases storing at least one individually identifiable revoked digital certificate; and
- 15 Application Program Interfaces APIs for users accessing the CRLs in the CRL database, said system enabling consolidation and access of the certificate revocation lists (CRLs) from the plurality of certificate authorities (CAs).
- Claim 2. (original) A system according to claim 1, wherein said plurality of CRL databases include a central CRL database and a plurality of CRL replication databases, said central CRL database for storing the consolidated CRLs from the multiple CRL retrieval agents,
- 5 and said plurality of CRL replication databases for storing the replications of the CRLs of the central CRL database.
- Claim 3. (original) A system according to claim 1, wherein said plurality of CRL retrieval agents include a LDAP/CRL retrieval agent, for periodically retrieving CRLs from specified LDAP servers and updating the CRL databases.
- Claim 4. (original) A system according to claim 1, wherein said plurality of CRL retrieval agents include a HTTP/CRL retrieval agent, for periodically retrieving CRLs from specified HTTP servers and updating the CRL database.
- Claim 5. (currently amended) A system according to claim 1, wherein said plurality of CRL retrieval agents include a

Patent Application No. 09/973,567

CA  
5 RFC1424/CRL retrieval agents, for periodically sending RFC1424/CRL Request For Comments 1424/Certificate-Revocation List retrieval request and receiving CRL retrieval reply.

5 Claim 6. (original) A system according to claim 1, wherein said plurality of CRL retrieval agents include a Http retrieval agent triggered by a HTTP request, said Http receiver agent verifies an authorization of the requester, if successful, said agent stores each transmitted CRL in the CRL databases.

Claim 7. (original) A system according to claim 1, wherein said plurality of CRL retrieval agents further verifies the integrity and the authenticity of the retrieved CRLs.

Claim 8. (original) A system according to claim 1, wherein a particular replication architecture is used among said plurality of CRL databases in order to maintain database consistency.

Claim 9. (previously presented) A system according to claim 2, wherein a hub-and-spoke replication architecture is used among said central CRL database and said plurality of CRL replication databases.

Claim 10. (currently amended) A system according to claim 1, wherein said system is also adapted for consolidating and accessing at least one kind of revoked certificate black list.

5 Claim 11. (currently amended) In a secure network implemented by digital certificates, a method for certificate revocation list (CRL) consolidation and access, wherein a plurality of certificate authorities (CAs) maintain and distribute the digital certificates revoked by themselves in the form of CRLs, and different CAs may use different CRL distribution mechanisms, said method comprising the steps of:  
10 periodically retrieving CRLs at time intervals from different CAs using ~~creating~~ a plurality of CRL retrieval agents based on the CRL distribution mechanisms of CAs, ~~for~~ ;  
consolidating the CRLs from multiple CAs;  
storing the consolidated CRLs from multiple CRL retrieval agents or the replications of CRLs into a plurality of CRL databases, the consolidated CRLs including at least one individually

Patent Application No. 09/973,567

C1  
15 identifiable revoked digital certificate; and  
accessing the CRLs from the CRL databases by a uniform set of  
APIs Application Program Interfaces.

Claim 12. (original) A method according to claim 11, said  
plurality of CRL databases include a central CRL database and a  
plurality of CRL replication database, said central CRL database for  
storing the consolidated CRLs from multiple CRL retrieval agents and  
5 said plurality of CRL replication database for storing the  
replications of the CRLs of the central database.

Claim 13. (currently amended) A method according to claim  
11, wherein said method is also adapted for consolidation and  
accessing all kinds of revoked certificate ~~black~~ lists.

Claim 14. (previously presented) An article of manufacture  
comprising a computer usable medium having computer readable program  
code means embodied therein for causing certificate revocation list  
(CRL) consolidation and access, the computer readable program code  
5 means in said article of manufacture comprising computer readable  
program code means for causing a computer to effect the steps of  
claim 11.

Claim 15. (original) A computer program product comprising a  
computer usable medium having computer readable program code means  
embodied therein for causing certificate revocation list (CRL)  
consolidation and access, the computer readable program code means in  
5 said computer program product comprising computer readable program  
code means for causing a computer to effect the steps of claim 11.

Claim 17. (original) A program storage device readable by  
machine, tangibly embodying a program of instructions executable by  
the machine to perform method steps for certificate revocation list  
(CRL) consolidation and access, said method steps comprising the  
5 steps of claim 11.

Claim 18. (currently amended) A method comprising:  
employing a secure network implemented by digital certificates  
for certificate revocation list (CRL) consolidation and access, with  
a plurality of certificate authorities (CAs) maintaining and

Patent Application No. 09/973,567

C/ 5 distributing the digital certificates revoked by themselves in the form of CRLs, wherein different CAs may use different CRL distribution mechanisms, including the steps of:

creating a plurality of CRL retrieval agents based on the CRL distribution mechanisms of CAs, the retrieval agents configured to  
10 periodically retrieve CRLs at time intervals from the different CAs  
and for consolidating to consolidate the CRLs from multiple CAs;

storing the consolidated CRLs from multiple CRL retrieval agents or the replications of CRLs into a plurality of CRL databases, the consolidated CRLs including at least one individually  
15 identifiable revoked digital certificate; and

accessing the CRLs from the CRL databases by a uniform set of APIs Application Program Interfaces.

Claim 19. (original) A program storage device readable by machine, tangibly embodying a program of instructions executable by the machine to perform method steps for certificate revocation list (CRL) consolidation and access, said method steps comprising the  
5 steps of claim 18.

Claim 20. (original) An article of manufacture comprising a computer usable medium having computer readable program code means embodied therein for causing certificate revocation list (CRL) consolidation and access, the computer readable program code means in  
5 said article of manufacture comprising computer readable program code means for causing a computer to effect the steps of claim 18.

Claim 21. (original) A computer program product comprising a computer usable medium having computer readable program code means embodied therein for causing certificate revocation list (CRL) consolidation and access, the computer readable program code means in said computer program product comprising computer readable program code means for causing a computer to effect the steps of claim 18.
